

FRAMERATE CHANGER

NKM_FrameRate Changer v1.1 is a script to quickly change the framerate of multiple footages or compositions in an After Effects project.

- Installation -

To install the script, copy the file **NKM_FrameRate Changer v1.1.jsx** into your After Effects Scripts directory

Windows:

C:\Program Files\Adobe\Adobe After Effects <version>\Support Files\Scripts

Mac OS:

Applications/Adobe After Effects <version>/Scripts

- Usage -

To run the script, go to: **File → Scripts → NKM_FrameRate Changer v1.1**

* Simply run the script and enter the new framerate you want to use.

* By default, the script will change the framerate for all files and comps in the bin of your current project.

* If you only want it to affect specific files, just select those footages (or compositions) before running the script.

****Note:** If you install the script when After Effects is running, you need to restart AE to use the script.
